

WIESEL-ANTI-SINKING PLATE

Soil stabilisation plate - rain shelter

Specific application:

Among others, the WIESEL-anti-sinking plate is applied

- ✓ in case of soft ground conditions offering little stability
- ✓ in case of anchor distances under 2 metres

Advantages:

- ✓ The innovative, four-sided splay to the bottom holds the soil together compactly.
- ✓ As a result, also the stability of the plate is increased significantly.
- ✓ At the same time, a destabilisation of the soil under the plate due to rain is prevented.
- ✓ Easy installation! The WIESEL-anti-sinking plate is installed under the anti-sinking shoe.
- ✓ Thus, also an upgrade of existing plants is easily possible.
- ✓ Depending on the soil conditions and the thereby given stability, different plate sizes can be applied.

Attention! In case of anchor distances under 1.5 metres, clamping is necessary.
